

Diabetes is a chronic disease that affects how the body processes blood sugar (glucose). It occurs when the body either does not produce enough insulin or cannot effectively use it.

Hypertension, also known as high blood pressure, is a condition in which the force of blood against artery walls is consistently too high, increasing the risk of heart disease.

Asthma is a respiratory condition where the airways become inflamed and narrow, making breathing difficult.

Cardiovascular diseases include disorders of the heart and blood vessels, such as coronary artery disease.

Obesity is a complex disease involving excessive body fat that increases the risk of other diseases.
